

True potato seed

Soltastic F1

B28100

NEW

A new and unique concept for the home garden!

Hybrid true potato seeds that result in a plant with a high ornamental value and from which uniform tubers can be harvested within one season.

Below you can find instructions you can give to your customers. Our recommendation is to put 10 till 15 seeds into retail packages meant for the hobby market.

Please contact us for more information.

Sowing

- Presow from February till May
- At a temperature of 16 till 20 degrees Celsius (very important first 4 days)

Planting

- 4 till 6 weeks after sowing
- Harden the plants off
- Don't plant too late, because of tuber forming
- Planting distance of 20 by 60 cm
- At half ridges or on beds
- Ridging throughout the season

Harvesting

- Yellow round-oval tubers with golden yellow flesh
- Fairly waxy
- Medium sized
- Harvest after 100-120 days after transplanting
- Way of harvesting is the same as seed potatoes

- **Disease free starting material**
- **Uniform tubers**
- **Less volume compared to seed potatoes**
- **Abundant flowering**
